Current Landscape: Existing Systems Fall Short

Manual Tracking Methods

Spreadsheets, notebooks, and emails create fragmented workflows with no centralised oversight of projects and payments

Template-Based Invoicing

Word processors and basic templates increase risk of duplicate invoices, calculation errors, and billing delays

Disconnected Analytics

Absence of integrated reporting makes it nearly impossible to monitor productivity, client profitability, or income trends

SOLUTION

Core Functional Requirement

User & Client Management

Secure registration, authentication, and comprehensive client database with editing capabilities

Project & Task Tracking

Create projects with status monitoring, manage tasks with priority levels, and track progress in real time

Intelligent Time Tracking

Start, pause, and stop timers with manual entry options for accurate billable hour recording

Automated Invoicing

Generate professional invoices based on hourly rates or fixed pricing with payment status tracking

Comprehensive Reporting

View earnings, time allocation, and project performance with client-wise and monthly analytics

Admin Controls

Platform management including user administration, system monitoring, and data maintenance
